

Flexibility for the smaller firm.

Wang Computer Systems

Basic answers for business management.

Wang Computer Systems

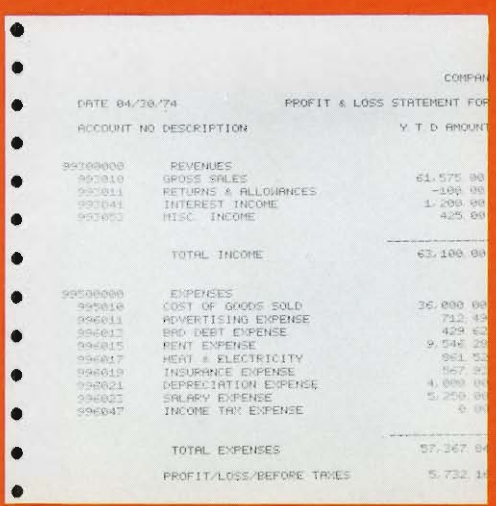

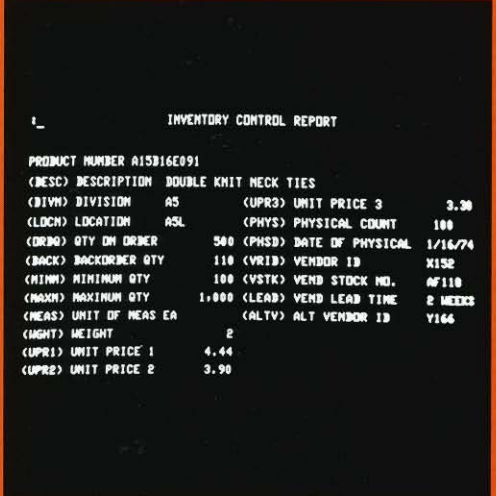

Just name your application, and chances are Wang can solve it. Payroll. Inventory. Receivables. General ledger. Sales analysis. Invoicing. Payables.

Wang Computer Systems bring computer power to a market long neglected by most computer manufacturers: smaller businesses and branch offices.

Gone are the manual records, accounting machines, ledger card systems and other interim technologies that most small businesses have had to use.

With Wang's new systems, you make a rapid and easy transition to the same level of computer power of large organizations.

Regardless of your applications, one of the new WCS computers can do the job — at a cost so low almost any small business can afford it.

Basic solutions for technical applications.

Wang Computer Systems

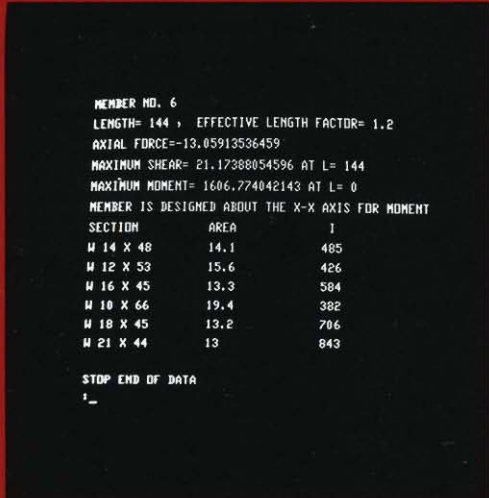

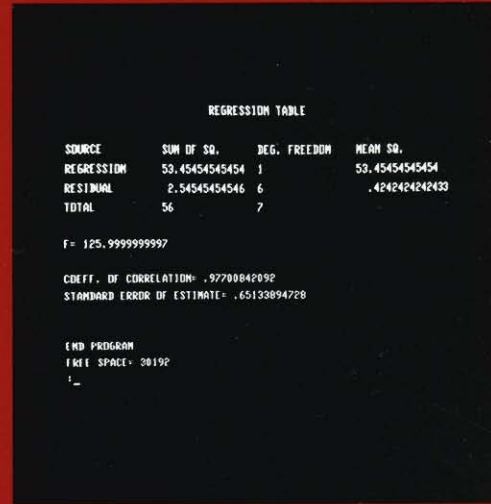

Whether a classroom, a medical facility, a mathematics group or an engineering operation, your choice of problem-solving tools is no longer limited to hand-held calculators, slow terminals or overworked batch computer centers.

Now you can have your own scientific processor and a complete array of peripheral for a fraction of the cost of powerful alternatives.

Wang Computer Systems offer what research, engineering and scientific professionals want most: complete solutions and immediate answers.

Even the most complicated formulae, statistical problems and mathematical equations can be solved by a stand-alone Wang Computer System.

Economical computer power.

Wang Computer Systems

Wang pioneered the inexpensive, easy-to-use computer system. Wang technology and systems concepts have developed the computer into today's BASIC problem solver, and one that demands no special user skills.

Wang Computer Systems, a composite of hardware, software and peripheral devices, offer the user the ability to customize his system to meet his needs, now and in the future. Wang allows you to add memory (to a maximum of 32,000 characters), data collection stations, medium and high-volume disk storage, faster printers, plotters, a digitizer, papertape or card readers for batch input, I/O interfaces, a telecommunications controller, and many more, from one of the widest selections of peripherals available from any manufacturer of small computers.

Because Wang designs, manufactures, sells and services its own products, Wang can provide a computer system that fits almost every business budget.

Wang Computer Systems

application. In research laboratories, WCS/20 can provide instant data reduction, off-line or on-line, at various locations. The small engineering office can process computations with finished printed or plotted output in a fraction of the time needed until now. For the smaller business, WCS/20 provides a very efficient, economical solution for such jobs as payroll, accounts receivable and other accounting functions, and provides all the management reports needed to run a business.

WCS/30 is the most powerful of the three systems.

With a 262,000-character, flexible disk drive and a five-million character, hard-surface disk drive with two platters, one fixed, one removable, plus a new high-quality, high-speed printer, WCS/30 is a fast, highly efficient data processing system.

WCS/30 has 16,000 characters of free working memory and 42,500 characters of "instant-on" BASIC language. Operation is extremely simple with its push-

button keyboard and operator-prompting screen.

WCS/30 can be expanded by adding memory and peripherals to provide instant, complete, customized answers to complex and cumbersome computing problems. Fast, efficient and accurate, WCS/30 gives business, science and engineering data processing capability with complete ease of operation.

Three systems for your business and technical applications.

WCS/10 offers simplicity and economy based on the cost-efficient use of tape cassette storage. The system features a TV-like screen which guides the operator step by step. A typewriter-like keyboard with special-functions keys provides easy, push-button operation.

WCS/10 includes 4,000 characters of working memory and 24,000 characters of "instant-on" BASIC language. The virtue of the BASIC language is its simplicity of use; single keystroke commands generate a variety of software

routines that make data processing easy for even inexperienced operators.

WCS/10 can be customized to suit a particular application by adding memory, printers, plotters, batch card readers, a digitizer and many more peripherals. That means you can adapt the system quickly to almost any need.

WCS/10 is so cost efficient that schools, for instance, can now afford to put one or more in every classroom. Businesses and government agencies can install them in home office and branch locations.

WCS/20 comes with a flexible disk drive for more on-line data and fast retrieval. Each disk platter stores 262,000 eight-bit characters.

WCS/20 has 8,000 characters of free working memory and 42,500 characters of "instant-on" BASIC language. Ease of operation is provided by the TV-like screen and a push-button keyboard.

By adding memory or peripherals such as one or two more flexible disk drives, and graphic or printed output, **WCS/20** can be customized to suit your particular

Simple computer operation.

Wang Computer Systems

Wang Computer Systems offer a simplicity of operation and an ease of operator control unmatched in the computer industry. Wang packages every computer in a compact work station with an operator-prompting screen and push-button keyboards, in which every key function is immediately accessible to the operator.

There is no cumbersome equipment to deal with, no cable ducts, air conditioning or special wiring involved with a Wang Computer System. The operator simply plugs it in, turns it on, and the system is ready for operation.

Wang builds its programs and job controls right into its hardware, so in many cases the operator need only touch a single key to process a task. Wang Computer Systems come with a built-in BASIC programming language, so that anyone can easily operate them.

Wang Computer Systems offer simplified job and operator control at a dramatically low cost.
